

## Introducing TabletPCR v4.00

## Beauty and Brains

### Have you ever wanted it all?

You don't have to settle for one or the other any longer. RescueNet Field Data TabletPCR (formerly EMS Pro) is the first field data product in the industry that combines proven, reliable technology with the most advanced user interface available.

### A good interface is a thing of beauty

TabletPCR's user interface brings the latest ideas and technology in usability to the electronic field data experience. Usability studies and labs were utilized in the development of the user interface allowing ZOLL Data Systems to observe EMS professionals using the system to eliminate trouble-spots and tedious operations.

- TabletPCR is optimized for touch-screen tablets but also allows for quick data entry via stylus and keyboard
- Automatically advances to next field when appropriate to eliminate extra work for medics and EMTs
- Easily tab from field-to-field when using keyboard-based input
- QuickLog allows fast logging of common procedures
- Complete Call Rules with hyperlinks to required fields
- Color-coded indicators for the status of sections in the PCR

### 10+ years experience and the brains you need

TabletPCR is still the most effective field data product for record accuracy, data integration and advanced analysis. TabletPCR is widely used in the EMS industry and has consistently improved from years of feedback from the field.

- Prevent incomplete Patient Care Reports
- Improve medic efficacy and reduce risk in the event of litigation or audits
- Eliminate inefficient paper processes
- Ensure protocol is followed consistently on each call
- Utilize integrated field data for syndromic surveillance
- Establish baseline metrics for EMS via in-depth reporting and analysis of operational data
- Share a common SQL database with all other RescueNet products for seamless data integration
- Get valuable data to help improve business processes with over 100 standard RescueNet reports

## RescueNet™

### The only integrated suite of EMS software solutions to maximize business performance

RescueNet is a fully integrated data management solution that gathers and centralizes information and links the entire pre-hospital chain of events into a single EMS system. It offers the quickest, easiest way to improve your business and clinical operations, and, it's the only EMS data management solution of its kind. RescueNet's open, Windows-based architecture delivers seamless integration with legacy systems, and provides scalability to grow your system as fast as you grow your business. As the suite of installed components expands within your organization, so do your benefits.

## RescueNet Dispatch™

### State-of-the-art EMS CAD solution that makes your entire operation more efficient

Whether you're fielding emergency calls or scheduling routine pickups for ground or air transports, RescueNet Dispatch's leading-edge architecture brings unmatched efficiency to all areas of your EMS operation.

## RescueNet Web viewer™

### Web-based dispatch software solution for access to dispatch information anytime and anywhere

RescueNet Web viewer is an optional module of RescueNet Dispatch that provides access to your dispatch center from any PC with Internet access. You can view vehicle information, open work and customer information, or page your crews and pull reports based on your operation's activity.

## NetTransit.com™

### Online EMS transport request and inquiry

NetTransit.com enables your customers to make online EMS transport requests and inquiries as well as monitor call status. Empower your customers and save valuable staff time in your dispatch center with a unique blue-ribbon service that will set you above your competition.

## RescueNet Crew Scheduler™

### Make better business decisions with optimized crew scheduling

You can accommodate user-specific scheduling patterns, management goals and employee needs by using the fully web-enabled functionality to allow all user groups to effectively plan operations and schedule shifts. And ensure the appropriate staffing and resource levels to meet fluctuating demand in a volatile environment.

## RescueNet Resource Planner™

### Demand-based personnel and resource management

RescueNet Resource Planner is a powerful tool for demand-based deployment of personnel and resources, balanced with service level agreements and financial goals.

## RescueNet Nomad™

### Mobile data terminal software solution that provides real-time, clear, and secure dispatch information to your crews

RescueNet Nomad's onboard electronic data communication system enables your dispatch center and crew to communicate accurately in real-time.

## RescueNet TabletPCR™ and RescueNet PocketPCR™

### Field data software solutions that can help you streamline data collection in the field

These solutions can help you deliver accurate electronic patient care reports, improve overall operations, eliminate inefficient paper processes, increase manpower efficacy, and help comply with HIPAA requirements.

## RescueNet Code Review™

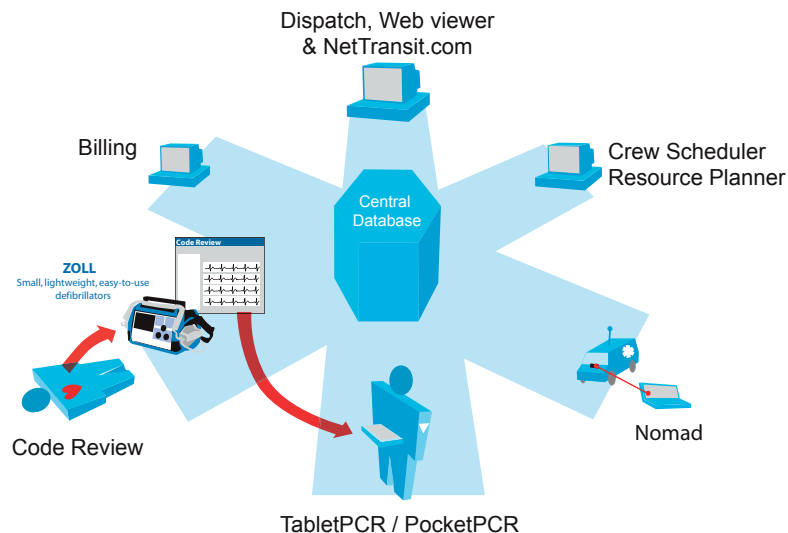

### Resuscitation data collection and management solution that automates quality improvement

RescueNet Code Review enables easy resuscitation data collection from ZOLL defibrillators and provides a full range of tools for QA/QI review, as well as pre-hospital data capture.

## RescueNet Billing™

### A billing and collection software solution that improves cash flow, reduces staff hours with automated billing

RescueNet Billing automates your billing process and instantly monitors claims for errors, which can result in quicker receivable turnaround times.
